DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by U. S. Patent No. 5,722,403 to McGee et al.
3. Regarding Claim 1-5, 7, McGee teaches a method of ablating myocardial tissue within the wall of the heart or within the wall of a blood vessel connected to the heart comprising: supplying microbubbles to the circulatory system of a mammalian subject so that the microbubbles perfuse the myocardial tissue of the subject; and while the microbubbles are present in the myocardial tissue, applying ultrasonic energy to the wall of the heart or to the wall of a blood vessel connected to the heart so that myocardial tissue having microbubbles present therein is heated by the ultrasonic energy and ablated. (Abstract, Col.17 lines 30-50, Figs. 8-12 and Claim 1)
4. Regarding Claim 6, McGee teaches that the microbubbles are present in the myocardial tissue to be ablated by ultrasonic imaging of the myocardial tissue. (Claim 43)
5. Regarding Claims 8-12, McGee teaches that the ultrasonic energy device includes a catheter structure and said catheter structure extends into or through the LA or LV when the device is in an operative condition, and wherein said catheter structure

includes a lumen having an opening, said opening communicating with the LA or LV when the device is in said operative condition, whereby the microbubbles can be administered by way of said catheter structure. (Abstract, Col.17 lines 30-50, Figs. 8-12 and Claim 1)
